

Keeping your plant operating

Planned solutions

As the OEM for the GEC Legacy fleet, we have the knowledge and resources to support your operation. We know that older turbomachinery can become unreliable, difficult to maintain and lack the performance it once had.

To help combat this, our team of field service engineers have a wealth of gas turbine expertise. We aim to minimise downtime, optimise reliability and manage costs to suit your operational needs.

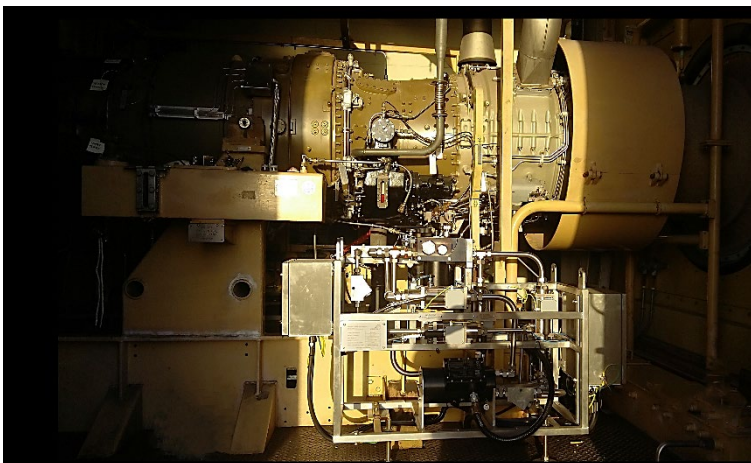

We conduct on-site overhauls, supporting the entire gas turbine package and control system.

We can help

This does not mean you have to accept increased risks affecting reliable and sustainable operations. We can help you keep your engine running, enhance operability and give you many more years of service.

We provide a wide range of support from basic ad-hoc callout maintenance, through to comprehensive integrated maintenance packages for the gas turbine and associated driven unit, and balance of plant.

When required, we also have experience of relocating complete gas turbine packages.

Planned solutions, with reliable outcomes.

Why choose Greenray?

We have expertise in:

- Aero-derivative and light industrial gas turbines
- Ancillary Systems
- LifeEX programme, to extend equipment longevity
- Emissions control capability
- Cyber security infrastructure surveys
- Obsolete Rustronic Mk II replacement package

A complete service

Our expertise is not limited to the turbine package, we also design and support the control systems and can supply reliable modular upgrades as standalone products, including:

- HMI
- Governor units
- Overspeed protection modules
- Vibration systems
- Fully instrumented fuel systems
- Driven unit control systems
- Fire and gas protection systems

The next step
